Stories are legend

Humankind has been telling stories since we evolved. Stories define us. Stories of our ancestors, of famous people we never got to meet. The stuff of legends, and far-away fantasy lands. Stories, carefully crafted over years of knowledge and wisdom. Stories that built people. Stories of love.

Parents and Storytellers

Monogatari (ものがたり), from the Japanese word for stories, is a platform, to weave your own beautiful stories, for the kids. The expansive imagination of the human mind, coupled with the power of a machine that feeds on stories, to give you amazing bedtime stories for your children.

The all new storytelling

We retrained GPT-2, a state-of-the-art text prediction model, on children's stories to allow it to generate stories of its own given a prompt. We used Bing and Pixabay APIs to fetch images. We integrated all of this into a beautiful website, so that your children can read, and be told stories of their favourite heroes.

The Princess of the Moon

There was once a beautiful princess who was good and kind, but her personality was too strong. She w absolute tyrant, and her actions were wrong. It was like she was a child who had become too weak. It was li a beautiful woman who had become too strong. Even though the one who was weak was a very beautiful w was not strong enough to be called a princess.

You know, this is what I've been thinking about, so it's not like we should just ignore it. If you think it's rig let you know. If you think it's wrong, then I'll help you out."

MacBook Pro

Even for the special ones

A good 60% of autistic kids are unable to comprehend long strings of text. This is for them, a well designed use of annotations and pictorial representations of their newly machine-powered stories. For the dreamers.

All-new storytelling.

A brilliant new experience
